

Tapecon is a recognized leader in the Membrane Technology arena. As with all Membrane Switches, our products are low voltage signal devices that provide reliable access to all common microprocessor based logic systems such as CMOS, TTL, NMOS, etc. With our years of experience in the design and production of Membrane Switches, we will work with you to first, define your requirements, then guide you through all available options and processes to pro-actively design both quality and cost effectiveness into your product. Our production facilities and quality assurance staff will ensure the continued integrity of that product. We also offer custom inventory management to ensure your product is available per your schedule and needs.

Our commitment to research, engineering, design, and quality assurance highlight our Technical Screen Print Division's dedicated support to OEM manufacturers.

**Membrane Switch Technology**

- Engineering and Design
- Tactile "click" buttons
- Selective textured coatings
- Racetrack/pillow/custom embossing
- Complete Value Added:
  - Housings
  - Metal Backers
  - Cable Assemblies
  - Embedded Component Technologies
  - EL Backlit Panels
  - Elastomeric Key Pads
- ESD, RFI & EMI Shielding
- 100% Testing
- Hybrid PC board/switches
- Modular/Edge/Pin connectors
- CAD design/computer graphics
